Summary:

Software Engineer with 7+ years of professional experience in C# and game development. Experienced in gameplay systems, software architecture, server-authoritative multiplayer, networking, CI/CD automation, debugging, and performance optimization. Recent project work includes ASP.NET Core backend development and Linux C++ networking/server systems.

Technical Skills:

- Platforms: Windows, Linux, Web
- Languages: C#, TypeScript, JavaScript, Python; C++20 (current systems project)
- Backend & data: C# / .NET, ASP.NET Core, REST APIs, Entity Framework Core (EF Core), PostgreSQL / SQL, Redis, JWT authentication
- Infrastructure & testing: Docker, Docker Compose, Testcontainers, integration testing, health checks
- Software architecture: OOP, SOLID, Dependency Injection / IoC, MVC, State Machines, Reflection, Serialization
- Networking: Server-authoritative architecture, TCP/UDP, client/server synchronization, custom Area of Interest (AOI), Mirror, Linux sockets / epoll
- DevOps: Git, Jenkins, CI/CD, automated build and deployment pipelines
- Real-time frameworks: Unity, Cocos Creator, Phaser 3, PlayFab, Firebase, Zenject, Unity Netcode
- Performance: Profiling, runtime debugging, performance and memory optimization

Projects:

Multiplayer Backend (C# / ASP.NET Core)

- Built REST APIs with EF Core/PostgreSQL, Redis/Lua login queue operations, JWT authentication, Docker Compose, health checks, and Testcontainers integration tests.

Authoritative Game Server (C++20 / Linux)

- Built a non-blocking TCP/epoll server foundation with timerfd simulation, packet framing, authoritative GameTime, rollback/resimulation, chunked AOI, and interest tracking.

Education:

Rangsit University

Bachelor's degree in Digital Innovation Technology

Specialized in Computer Games Multimedia | Graduation Year: 2019

Skills:

- Server-authoritative multiplayer architecture
- Software architectural design and integration
- Client-side prediction and server reconciliation
- Custom grid-based Area of Interest / interest management
- ASP.NET Core and REST API development
- PostgreSQL, Redis, and integration testing
- Linux networking with non-blocking TCP and epoll
- Debugging, performance, and memory optimization
- Code review and architectural decision-making

Work Experience:

Iconix One (Bangkok, Thailand)

Game Software Engineer

Jun 2026 - Aug 2026

- Web game development using Cocos Creator.
- Gameplay and application architecture using MVC and state machines.
- Code reviews and architectural decisions.

Playbux (Bangkok, Thailand)**Senior Level Software Engineer**

Jun 2024 - Aug 2024

- Server-authoritative multiplayer gameplay development using C# and Unity.
- Custom grid-based Area of Interest (AOI) system integrated with Mirror for player visibility filtering and selective network state synchronization.
- Server-authoritative player movement using client-side prediction and server reconciliation.
- Server-side gameplay systems including spawning, combat, and shared world state.
- Mirror networking using a heavily modified UDP transport layer.

HotPlay (Thailand) Co., Ltd (Bangkok, Thailand)**Mid Level Software Engineer**

Jan 2023 - Apr 2024

- Gameplay feature development across multiple Unity projects and full-cycle development of a hyper-casual game from the ground up.
- Software architecture using SOLID principles and Dependency Injection / IoC, including an interface-based object pooling system supporting pooled objects through shared abstractions.
- Automated Unity build and deployment pipeline using Jenkins, including approved source retrieval, Unity version selection, repository-defined build parameters, packaging, and deployment to the internal test server.
- Performance profiling and debugging on target platforms to identify runtime bottlenecks.

Gamespace Inc (Bangkok, Thailand)**Game Developer**

May 2019 - Dec 2022

- Reusable 2D UI animation system in C# using DoTween.
- Cross-platform third-person movement and camera system developed from scratch.
- Runtime save/load system supporting game object state and functionality restoration.
- Reflection-based UI generation from C# fields and data structures.
- Additional gameplay systems including quest, interaction, localization, object placement, and procedural generation.

Playlab Games (Bangkok, Thailand)**Junior Game Developer**

Jan 2019 - Apr 2019

- Mobile gameplay feature development using Unity and C#, including infinite-runner mechanics, boosters, frontend implementation, and 2D UI animation.

Lume Studio (Remote)**Junior Software Engineer**

Feb 2018 - Dec 2018

- Gameplay feature development for a Unity mobile game, including puzzle mechanics, refactoring, and gameplay/UI bug fixing.
